## Mathematical formulation

$$L = \frac{L_0}{1 + I^2}$$

$$U = L \frac{dI}{dt}$$

$$I = -C \frac{dU}{dt} \quad t = 0, \quad I = 0, \quad \frac{dI}{dt} = \frac{U_0}{L_0}$$

## Mathematical formulation

$$\frac{d^2 I}{dt^2} = \frac{2I}{1 + I^2} \left( \frac{dI}{dt} \right)^2 - \frac{I (1 + I^2)}{L_0 C}$$

$$\tilde{y}'(t) = \begin{bmatrix} y_1'(t) \\ y_2'(t) \end{bmatrix} = \begin{bmatrix} y_2(t) \\ \frac{2y_1(t)y_2^2(t)}{1+y_1(t)^2} - \frac{y_1(t)(1+y_1(t)^2)}{L_0C} \end{bmatrix}$$

## Numerical Methods - Runge Kutta 4

$$K_1 = hf(x_n, y_n)$$

$$K_2 = hf\left(x_n + \frac{h}{2}, y_n + \frac{k_1}{2}\right)$$

$$K_3 = hf\left(x_n + \frac{h}{2}, y_n + \frac{k_2}{2}\right)$$

$$K_4 = hf(x_n + h, y_n + k_3)$$

$$y_{n+1} = y_n + \frac{1}{6} (K_1 + 2K_2 + 2K_3 + K_4) + O(h^5)$$

## More math

$$\frac{dE}{dt} = \frac{d}{dt} (U(t)^2 - \log(1 + I(t)^2))$$

# The derivative

$$= 2 \left( \frac{\frac{dI}{dt} \left( 1 + I(t)^2 \right) \left( \frac{d^2 I}{dt^2} \right) - 2I(t) \left( \frac{dI}{dt} \right)^2}{(1 + I(t)^2)^3} - \frac{I(t) \left( \frac{dI}{dt} \right)}{(1 + I(t)^2)} \right)$$

$$\frac{dE}{dt} = (0 - 0)$$

$$= 2 \left( \frac{\frac{dI}{dt} \left( 1 + I(t)^2 \left( \frac{d^2 I}{dt^2} \right) - 2I(t) \left( \frac{dI}{dt} \right)^2 \right)}{(1 + I(t)^2)^3} - \frac{I(t) \left( \frac{dI}{dt} \right)}{(1 + I(t)^2)} \right)$$

$$U_0 = 240V$$
